

## AUTOMATED ASSISTED TRADING SYSTEM (ATS)

TradeFoxX Auto-Scalper is more than just an automated trading strategy; it's your disciplined trading companion. By removing emotions from the trading equation, it empowers you to make precise decisions based on predetermined criteria. This advanced strategy leverages TradeFoxX Indicators and operates seamlessly on the NinjaTrader Version 8 platform.

One of its standout features is the ability to undergo rigorous backtesting through NinjaTrader Strategy Analyzer. Backtesting employs historical market data to evaluate the strategy's effectiveness and fine-tune its settings for optimal performance in your chosen market. This meticulous process allows you to assess your system's expectancy, providing insight into what you can realistically expect to gain or lose.

The core of the TradeFoxX Auto-Scalper is a collection of proprietary and classic trade setups known as "Trade Events." These events, along with their sub-events, automatically trigger trade execution when the predefined signals align. Even in volatile markets, the rules remain unwavering, preserving the discipline that often eludes human traders due to emotional factors like fear of loss or the desire for additional profit. Automated assistance ensures that these absolute rules are followed with robotic precision, eliminating emotional interference.

It's essential to recognize that there's no such thing as a perfect Auto-Scalper Trader that wins every time – losses are an inherent part of trading. TradeFoxX Auto Bot is your tool for achieving consistency in both wins and losses, thanks to its steadfast adherence to predetermined rules. This auto bot reacts swiftly to evolving market conditions, executing orders the moment the trade criteria are met. This agility can significantly impact trade outcomes, demonstrating one of the many advantages of an automated trading assistant.

While backtesting provides valuable insights, it's important not to view the percentage as an absolute guarantee. Real-time simulation or live trading often yields results that are notably higher, typically surpassing 50%. In essence, you can expect better results in paper trading compared to your backtesting analysis using the strategy analyzer.

Keep in mind that our Auto-bot is optimized for Renko chart styles, and we strongly discourage experimenting with other chart styles such as minute or ticks. Our experience has shown that the Auto-bot's performance is less favorable in these chart styles.

Trade with precision and confidence using TradeFoxX Auto-Scalper – your trusted partner in the world of automated trading.

## AUTOMATED ASSISTED TRADING SYSTEM (ATS)

### Disadvantages and Realities of Automated Trading Systems

As previously emphasized, it's crucial to understand that no trading Auto Assisted Guide can guarantee a 100% win rate. While there are numerous benefits to using a well-designed Auto Bot, it's equally important to be aware of its limitations.

Automated assisted trading represents a sophisticated trading approach, but it's not immune to potential issues. For instance, in the event of an internet connection loss, an order may fail to reach the market, or only the Stop Loss component of an order fill might trigger its closure, leaving other Auto Bot logic out of the exit equation.

Another point to note is that there may be disparities between the "theoretical trades" generated by the strategy analyzer and the real trades executed on the order entry platform. Expectations versus reality may vary.

When venturing into automated trading systems, traders should anticipate a learning curve. It's advisable to start with small trade sizes while refining the process. A prudent approach is to simulate trades using a Ninja Trader SIM account for a month before considering live trading with the Auto-Scalper, ensuring you can demonstrate a profitable streak during simulation.

It's essential to keep a watchful eye on the system ("babysit" it) since automated trading systems require monitoring. Mechanical failures, such as connectivity issues, power outages, or computer crashes, as well as system quirks, can occur. Vigilant monitoring allows for the quick identification and resolution of anomalies like errant orders, missing orders, or duplicate orders.

Beware of over-optimization during adjustments of settings and backtesting. Traders who excessively tailor their strategies to historical data risk creating plans that appear flawless on paper but perform poorly in live markets. Over-optimization involves fine-tuning a strategy to yield exceptional results in historical data, leading to the mistaken belief that it should consistently generate profits or avoid drawdowns in live trading. Consequently, parameters may be tweaked to create a "near-perfect" plan that ultimately fails when applied to real-market conditions.

Finally, it's crucial to recognize that this is a genuine Trade Bot capable of live trading. Never engage in live trading until you have thoroughly demonstrated its profitability through extensive simulations. There is no guarantee that this bot will yield profits every time; it is not a foolproof profit-generating machine.

## AUTOMATED ASSISTED TRADING SYSTEM (ATS)

Setting up the Auto-bot is a straightforward process, making it easy to commence testing and paper trading using NinjaTrader's simulator account. To get started, it's essential to practice with live data feeds. You can obtain a free trial from NinjaTrader for this purpose, or alternatively, use the data feed provided by your brokerage.

During the initial phase, it's crucial to engage in simulation for a few weeks. This allows you to immerse yourself in your preferred market and select the timing that suits your strategy. Moreover, you can fine-tune parameters such as lot or contract sizes and establish stop/profit targets that align with your intended bankroll management strategy.

## AUTOMATED ASSISTED TRADING SYSTEM (ATS)

Trade Parameters	
ATM Name Case Sensitive	Forex-EURUSD3
Limit=1/Market=2/BackTest=3	3
BKTest Contract or lot size	100000
Set Ticks =0 or Pips =1	1
Profit Ticks or Pips	25
Loss Ticks or Pips	15

The Auto-bot's functionality hinges on the presence of an Automatic Trade Management (ATM) setting. Within this ATM, you specify the initial Profit Target and Initial Stop Target. For futures trading, you configure it in ticks, while for forex trading, you use pips.

Importantly, take note that the ATM name is case-sensitive, and spaces should be replaced with dashes. When engaging in live or paper trading with a chart that has a live feed or playback, set the purchase option to Limit (1) or Market (2). If your broker's market prices consistently start you off negatively, opt for limit orders instead.

For backtesting purposes, set the value to 3 in the Limit/Market/Backtest Field. Please be aware that fields like BKTest Contract or Lot, Set Ticks or Pip, Profit Tick or Pips, and Loss Tick or Pips are exclusively intended for backtesting and should not be used in live trading.

All settings related to targets, trailing stops, contract or lot sizes are entirely customizable. You create an ATM in the chart you plan to trade in, assigning it a name for the ATM field. Once the ATM is configured to your liking, you can activate the TradeFox Auto-bot. At this point, the program becomes operational, autonomously executing trades.

If you're uncertain about how to create an ATM, you can find instructional resources on YouTube. Alternatively, if you prefer, we're more than willing to provide you with an example ATM tailored to your chosen market to facilitate your testing process.

## AUTOMATED ASSISTED TRADING SYSTEM (ATS)

### **Will it work on all time-frame?**

No, Trade Setups do not perform on all time-frames or special charts like Range. Renko 8 and Renko 10 work great for Forex, Renko 4, 8 and 10 work well for futures. You will have to find which Renko works for you. Minute charts or Ticks Chart do not work well with the Auto-bot and is not recommended.

### **Can I use the Auto-Scalper on more than one chart and instrument at the same time?**

Yes you can open on chart with the ES and its special ATM Strategy and open another trading Oil, Gold or Forex with a different ATM and using any logic you wish.

### **Can I use currency target instead of ticks?**

No you must figure out how many ticks give you a currency equivalent for instance 4 ticks in the ES is \$50 win or \$50 loss for one contract. In Forex use ATM and use pips lots 1000 10000 100,000

### **Why does Heiken Ashi work with the Auto-Scalper?**

For some unknown reason the Heiken Ashi Charts work better with our logic. The 3 to 15 minutes charts produce promising results. We been trying to figure it and have come to this conclusion. Heiken Ashi produces an average price bar and because the logic is based on averages, the probability of averages to averages is better than averages to actual current price.

### **Why does Renko work better with the Auto-Scalper?**

For A Renko chart is a type of chart, developed by the Japanese, that is built using price movement rather than both price and standardized time intervals, This work good on Forex has you can make the value 1 pip 2 pip 10 pip each box movement less noise on Renko better to trade short term. Human control can be achieved at 4 to 10 pips or more. Less than 4 better let the robot do everything market to fast for human to react.

### **Top 10 Rules For Successful Trading**

#### Rule 1: Always Use a Trading Plan

A trading plan is a written set of rules that specifies a trader's entry, exit, and money management criteria for every purchase.

#### Rule 2: Treat Trading Like a Business

To be successful, you must approach trading as a full- or part-time business, not as a hobby or a job.

#### Rule 3: Use Technology to Your Advantage

Trading is a competitive business. It's safe to assume that the person sitting on the other side of a trade is taking full advantage of all of the available technology.

#### Rule 4: Protect Your Trading Capital

It is important to note that protecting your trading capital is not synonymous with never experiencing a losing trade. All traders have losing trades. Protecting capital entails not taking unnecessary risks and doing everything you can to preserve your trading business.

#### Rule 5: Become a Student of the Markets

Think of it as continuing education. Traders need to remain focused on learning more each day. It is important to remember that understanding the markets, and all of their intricacies, is an ongoing, lifelong process.

#### Rule 6: Risk Only What You Can Afford to Lose

Before you start using real cash, make sure that all of the money in that trading account is truly expendable. Losing money is traumatic enough. It is even more so if it is capital that should have never been risked in the first place.

#### Rule 7: Develop a Methodology Based on Facts

Taking the time to develop a sound trading methodology is worth the effort. It may be tempting to believe in the "so easy it's like printing money", But facts, not emotions or hope, should be the inspiration behind developing a trading plan. Learning how to trade demands at least the same amount of time and fact-driven research and study.

## AUTOMATED ASSISTED TRADING SYSTEM (ATS)

### Rule 8: Always Use a Stop Loss

A stop loss is a predetermined amount of risk that a trader is willing to accept with each trade. The stop loss can be a dollar amount or percentage, but either way, it limits the trader's exposure during a trade. Using a stop loss can take some of the stress out of trading since we know that we will only lose X amount on any given trade.

The ideal is to exit all trades with a profit, but that is not realistic. Using a protective stop loss helps ensure that losses and risks are limited.

### Rule 9: Know When to Stop Trading

There are two reasons to stop trading: an ineffective trading plan, and an ineffective trader. An ineffective trading plan shows much greater losses than were anticipated in historical testing. That happens. Markets may have changed, or volatility may have lessened. For whatever reason, the trading plan simply is not performing as expected. Stay unemotional and businesslike. It's time to reevaluate the trading plan and make a few changes or to start over with a new trading plan.

### Rule 10: Keep Trading in Perspective

Stay focused on the big picture when trading. A losing trade should not surprise us; It's a part of trading. A winning trade is just one step along the path to a profitable business. It is the cumulative profits that make a difference.

# Forex Trading Sessions

There are generally four main trading sessions: the Sydney session, Tokyo session, London Session, and the New York session. Both the Sydney and Tokyo sessions are customarily referred to as Asian sessions.

This is why Forex is usually referred to as the 3-session market: Asian, London, and New York. The Asian session starts with the Sydney market opening at 2200hrs GMT. Although it is referred to as Sydney open, it is actually the time when the New Zealand financial markets open. **Asian and Sidney Markets Start at 8:00PM Easter Time**

## London/European Session

The London session opens at 0800hrs GMT, just as the Tokyo session closes. This is the biggest forex trading session, accounting for over 32% of all activity. The London session closes at 1600hrs GMT.

**London/European Session AT 2:45AM Easter Time and Ends 11:30AM Easter Time**

## New York Session

The New York session opens at 1300hrs GMT, while the London session is still running. The New Session closes at 2100hrs GMT. The New York session also features high activity, especially during the early hours when it overlaps with the open London session. Most movements are driven by the US dollar, which is the most traded currency as well as the most influential in the Forex markets. Additionally, most news and events that impact the US dollar are typically released in the early hours of the New York open. There is high liquidity and volatility in the early hours during the London/New York overlap (1300hrs GMT – 1600hrs GMT), and most assets feature thin spreads. However, volatility and liquidity tend to decrease during the latter half of the New York session. The USD is the cue provider during the New York session, and traders can trade all the major pairs such as , GBPUSD, USDCHF, USDJPY, USDCAD, AUDUSD, and NZDUSD.

**New York Session Starts 7:45AM and ends 3:45 PM best action 7:45AM to 10:45AM**

Trading Session always the start 3 hours Max.

Session London	2:00AM to 5:30	Best Time 4 hours EUR
Session London New York	7:00AM to 11:30AM	Best Time 4.5 hours US
Session Asia	8:00 PM to 11:30PM	Best Time 3.5 hours JPY
